

Global Connections at Light Speed

24/7 FIBER NETWORK

Collocation * Dark Fiber Leases * Managed Networks * Tier One Cross Connects

Optical Transport * Metro Ethernet

24/7 Fiber Network offers National Reach to Local, Regional and International Carriers

and Enterprises while providing Metropolitan Saturation necessary to deliver

Optimal Network Savings.

24/7 Fiber Network can enable you to operate your own Private Optical Network without

the cost and overhead to construct and manage a Physical Network. Your Metro Dark

Fiber Network will operate using your Optical Protocols of choice giving you the Ultimate

Flexibility. Dark Fiber Network configurations can be Ringed, Point-to-Point, Point-to-

Multipoint, or Mesh Topologies.

Based in the Mid-Atlantic States including Baltimore-Washington, D.C. Metropolitan Region and Delmarva Peninsula.

Our base location is served by a variety of Major Data and Telecommunications Carriers.

We are Carrier Neutral, which enables Tenants and Customers to have the Access and

Economic Benefit of Multiple Carrier Options. We have Cross Connected Access to all

Major Tier One Fiber and Bandwidth Providers.

24/7 Fiber Network can deliver National and Local Network Solutions.

SERVICES

24/7 FIBER NETWORK

Custom Transport Network Planning and Design

24/7 enables rapid planning and design of custom fiber and fixed wireless networks leveraging the broad embedded base of 3rd party fiber, infrastructure, and facilities. Around a broadband wire-line core, networks easily branch out leveraging a range of multi-model technologies.

Dark Fiber Leases & Builds

Please contact us for a full range of products and services that can be customized for your needs.

Collocation: Connecting Data Centers and Mission Critical Facilities

Whether interconnecting to high capacity carrier hotels or to other enterprise locations in the same market or another state, 24/7 identifies the complete range of options. From site selections to facility turn-up, 24/7 can rapidly iterate through and show you the range of options available. Collocation - 24/7 Fiber Network can give you the efficiencies of access to multiple providers with the convenience of a single interface. 24/7 can help establish or expand your network reach and enhance network capacity and performance.

24/7's Collocation Facility features customizable space and power to accommodate your unique requirements. Highest standards - such as redundant UPS power and generator backup, temperature and humidity controls, and fire protection are built into the infrastructure. We safeguard your systems against physical and virtual intrusions or tampering with comprehensive security measures that range from 24x7 monitoring and secure access to locking cabinets and cages

Manage Growth - Quickly and easily manage bandwidth growth through our cross connects available in various media types. **Improve Performance and Reliability** - Minimize network failure by eliminating the most common point of failure - local loops. **Increase Options** - Maximize network performance with access to scalable bandwidth from multiple providers. **Reduce Expenses** - Cost-effectively access multiple bandwidth providers in order to reduce your reliance on costly local loops.

One-stop Shopping. 24/7 offers unmatched network diversity plus a broad array of customizable services for all your collocation needs - from experienced technical support, on-line storage and backup, Internet security, and network server management, to content distribution, etc.

Tech Services Field services, inside and outside plant technicians

If complete outsourcing is not in your current plans, 24/7 can take over the responsibilities for providing inside or outside field services support. Whether your company collocates in a single facility or multiple sites, your mission-critical equipment requires routine maintenance and timely problem resolution to ensure maximum uptime. You may have limited technical resources - or your staff may already be dedicated to multiple projects. 24/7 Tech Services is there any time you cannot be. Reliable expert assistance is available around the clock for out-tasking your technical support needs.

Program Management * Increased Reliability * Improved Performance

Reduced Expenses

Enterprise Optical Networks Enterprises are increasingly leveraging dark fiber networks to interconnect data centers and other mission critical facilities for cost effective transport and enablement of high availability applications and business continuity plans. 24/7 will provide the full range of connectivity options with an understanding of the strengths and weaknesses of each and the potential lateral construction and network integration required.

Advanced Security. In addition to industry standard security infrastructure, 24/7 Fiber Network provides 24 x 7 remote monitoring of all facilities from our Security Operations Center (SOC).

Network Management, Routine Maintenance and Emergency Restoration

Our program managers are experienced in all technical facets of customer implementations from identifying specifications to project implementation to customer equipment turn-up for one or multiple sites. Your assigned program manager will be with you every step of the way, working to minimize your time-to-market interval. 24/7 Fiber Network can deliver routine or emergency maintenance. Contact us for a comprehensive list of services available.

Locating

As a member of the National Miss Utility Program, 24/7's marking and flagging/ staking conforms to the national standards. 24/7 will manage receive, record and dispatch all Utility Locating Tickets as required.
