

COS Systems is the developer of COS, an OSS solution that offers automated provisioning, monitoring, and support capabilities for FTTx networks. COS offers a highly secure and customizable self-service portal – the COS Services Marketplace that enables customers to select service offerings and billing plans from their network provider(s), and automatically provisions the desired services.

COS delivers these services without the truck rolls and delays associated with manual provisioning using Instant ActivationTM, lowering new service deployment costs, accelerating new service revenues and increasing ARPU.

Industry Segments Served: Municipal and Community Broadband networks; MDU/PCO; Telcos; Cable TV;
