CALIX OVERVIEW

Calix is a leading provider in North America, the Caribbean, and Latin America of broadband communications access systems and software for fiber-based access network architectures that enable communications service providers (CSPs) to connect to their residential and business subscribers. We enable CSPs to provide a wide range of revenue-generating services, from basic voice and data to advanced broadband services, over their fiber access infrastructures. In addition, our solutions are designed to minimize the capital and operational costs of CSP networks.

Calix focuses solely on CSP access networks, and its Unified Access portfolio is designed to enhance and transform these networks to meet the changing demands of subscribers, rapidly and cost-effectively, and to evolve their networks and service delivery capabilities at a pace that balances their financial, competitive and technology needs. Over 500 total service providers, operating over 32 million access lines depend on Calix to power their access networks.

The Calix Unified Access portfolio consists of two core platforms driven by the Calix Ethernet eXtensible Architecture (EXA), a standards-based Ethernet kernel built for access, and complemented by a broad range of optical network terminals and comprehensive systems management:

- *The Calix C-Series multiservice, multiprotocol access platform*
    - *The EXA Powered C7 Multiservice Access Platform*
- *The Calix E-Series Ethernet service access platforms*
    - *The EXA Powered E7 Ethernet Service Access Platform*
    - *E5-100 / E5-400 Ethernet Service Access Nodes*
- *The Calix P-Series optical network terminals*
    - *700GX / 700GE ONT families (30 different models)*
- *The Calix Management System, or CMS, network management software*

Calix customers have come to rely on the consistent reliability of our frictionless business model:

- Deployable, standards-based solutions featuring the longest usable life and lowest operational expense

- Focused, flexible architecture, enabling customers to deploy the appropriate combination of services required to support their unique subscriber demographic and network infrastructure

- Direct engagement and support, backed by a world class service organization

With 300+ customers operating fiber access networks, Calix possesses an unrivaled track record of documented product innovation and successful FTTH deployment experience.
