

Overview

Go Express is a full service delivery company that was founded in 1999 by industry professionals to service the greater New York tri-state area and subsequently branched out to include domestic firms throughout the United States.

Go Express, which offers a versatile selection of delivery solutions, became focused on the growing need for safe, secure, and reliable methods of relocating and shipping IT hardware.

As a service enhancement to the existing platforms **Go Express** provided, new provisions were created to insure that items such as rack-mount systems, switches, servers, tape libraries and flat panel screens could be shipped in such a manner that almost all risk of damage was eliminated.

By utilizing shipping materials that were tested by its operations team, **Go Express** created a service that has been utilized not only by some of the largest corporations in the U.S., but a host of IT firms which run from engineering firms to consultants to hardware vendors. Our packing expertise is trusted on all levels by these firms.

Additionally, **Secure Data Transport** was offered as an enhancement for those companies that require only the safest and most secure method of shipping their IT equipment with the reassuring knowledge that their valuable data will not, under any circumstance, be compromised by the time it reaches its destination. Our GPS tracking system on all vehicles guarantees that every step of the way, **Go Express** can monitor the progress of its deliveries.

Go Express can also provide up to \$2,000,000 of cargo insurance for all shipments of equipment (with higher amounts available upon request) and all employees are personally covered by a \$1,000,000 fidelity bond.

As an additional convenience, **Go Express** provides secure warehouse space for storage and redeployment of equipment and can provide removal services for end-of -life, including certificates of destruction from registered and qualified recycling firms that meet and/or exceed all DOD requirements.
