

CORPORATE OVERVIEW

SALT RIVER PROJECT (SRP)

Based in Phoenix, SRP was established in 1903 as the nation's first multipurpose reclamation project authorized under the National Reclamation Act by Theodore Roosevelt. SRP is two entities: the Salt River Project Agricultural Improvement and Power District, a political subdivision of the state of Arizona; and the Salt River Valley Water Users' Association, a private corporation.

Today, SRP is the nation's third-largest public power utility and one of Arizona's largest water suppliers with nearly a million customers throughout a 2,900-square-mile service territory in central Arizona. For a century, SRP's response to growth, community and environment has helped shape a desert landscape into the fifth largest thriving metropolitan area in the U.S. Diversification of services is one way SRP has met the challenge of population and industrial growth.

In addition to its water and power business, SRP supports the fundamental elements of modern communications services, including wireline broadband network and wireless site locations. SRP operates one of the largest fiber-optic-based communications networks in Arizona. Concentrated in the Phoenix metropolitan area, we offer the market's densest metropolitan area carrier's carrier network.

SRP TELECOM

SRP Telecom is a carrier-neutral network and communications infrastructure provider to wireless and wireline telecommunications service providers and enterprise customers operating in the Phoenix metropolitan area. We offer unparalleled market coverage, connectivity and a single source to get you there. The geographically pervasive dark fiber network enables carriers, wireless providers, Internet service providers and enterprise customers to deliver their clients the infrastructure necessary for highly integrated subscriber services.

SRP's electrical facilities also provide a substantial value to wireless colocation. Most cities have stringent zoning ordinances for wireless infrastructure, preferring colocation on "existing verticality" instead of allowing new vertical wireless structures. SRP Telecom's wireless services offer wireless providers the expansive geographic coverage of Phoenix without the need to build additional towers.

WE HAVE PHOENIX COVERED

As a neutral carrier's carrier, SRP Telecom offers customers the power of choice and network flexibility. Our dark fiber network, vertical elements, site locations and rights of way can provide the infrastructure you need to maximize your investment and speed your deployment time to market, regardless of evolving technology. Perhaps, one of the greatest compliments we receive from customers is that we offer reliable, seamless and timely connectivity solutions to the demands of their mobile broadband, carrier Ethernet and optical needs.

SRP Telecom provides customized solutions to the unique network challenges of the expansive Phoenix metropolitan marketplace. No one knows Phoenix better than SRP Telecom.

WIRELESS PRODUCTS	WIRELINE PRODUCTS
Wireless Site Development and Maintenance <ul style="list-style-type: none"> • Site location and feasibility analysis • Complete zoning approval process • Site design and construction • Ongoing usage and maintenance 	Fiber Optic Infrastructure Services <ul style="list-style-type: none"> • Custom Private Optical Network Solutions
Cell on Wheels (COW) Service	Wireless Cell Site Backhaul Services <ul style="list-style-type: none"> • Fiber to the Cell Site • SONET Service – DS1 private line service to SRP built cell sites
